SUMMARY

Senior engineer with 7 years shipping React Native apps to the App Store and Google Play, plus full-stack web with Next.js and NestJS. Today at Globant I own the AI side of the delivery process: agents, skills and workflows that the whole team (UX, product, frontend, QA) uses daily; before that I led the team at Biotoken. I work agent-native: Claude Code daily, plus my own agents and a development/testing/code-review harness with layered human + agent verification, so a small team ships like a larger one. Fluent working English with US, Canadian and European teams since 2021.

EXPERIENCE

Software Designer · Globant **Feb 2026 – Present**
Full-time · Remote

- **Arden University (UK)**, React web app with a Java backend and an upcoming React Native app: own the team's AI-assisted SDLC, building the agent harness inside the repository with Claude Code and Globant Coda CLI.
- Create custom skills, agents and workflows on demand for UX, product, frontend and QA, and onboard every team member onto the tooling.
- **Farmacity**: Senior React Native developer, carried the client's mobile app project through delivery.

Team Lead – Frontend & Full-Stack · Biotoken **Jan 2025 – Feb 2026**
Full-time · Remote

- Led a team of 2 developers: owned delivery, planning and code review for the whole product.
- Built a full-stack platform end to end: NestJS REST API plus React / Next.js web and React Native mobile clients.
- Designed, tested and deployed Solidity smart contracts on Polygon (ERC-1155 linked to ERC-20) for a soil-carbon token system.
- Set up an agent-driven workflow (Claude Code, custom agents, automated test and review harness) with human sign-off on every merge.

AI Engineer – Agents & Automation · Oblivion Tech **Feb 2026 – Present**
Contract · Agent-driven software studio for startups and SMBs

- Built an autonomous coding agent that turns GitHub Issues into reviewed pull requests: a deterministic state machine orchestrates, the LLM only writes code (~450 commits, 89+ merged PRs, ~300 automated tests).
- Quality gates on every PR: schema-validated plans, dependency readiness checks, read-only AI diff review with prompt-injection detection, and Playwright end-to-end tests with autofix.
- Multi-model routing (Claude, Codex, GLM, DeepSeek, Qwen) with fallbacks, plan/review caching and per-call token and cost tracking, plus an ops dashboard for usage, cost and failed runs.
- Least-privilege security: bot account that cannot change CI or merge its own PRs, pre-push guard and gitleaks secret scanning.
- Spec-driven development with OpenSpec; authored reusable Claude Code skills (web audit, design tokens, section rebuild, motion design).
- Shipped client products through the pipeline: a field-service PWA (Next.js 14, NestJS, MongoDB) and a multi-tenant e-commerce platform (NestJS, Next.js).

Senior React Native Developer · YoCripto **Nov 2022 – Sep 2024**
Full-time · Remote

- Maintained and stabilized the production React Native / Expo app.
- Built a new app on Expo SDK 48 with push notifications, config plugins and native modules for identity verification (KYC).
- Built a React admin dashboard from scratch to manage feature flags, A/B tests, themes and user debug data.

Senior React Native Developer · TrueNorth **May 2022 – Oct 2022**

Contract · Fintech app for a Canadian client · 13-person team

- Coordinated user stories, backend endpoints, frontend implementation and QA across a 13-person team.
- Built CI/CD on Bitrise to automate building and publishing app releases.
- Migrated 3 React Native apps into a monorepo with shared resources.

Senior React Native Developer · WeDevelop **Nov 2021 – May 2022**

Contract · Social app for Keller Williams agents · team from the US, Poland and Ukraine

- Built posting, replies, image/video capture (React Native Camera) and GraphQL integration.
- Owned production releases each sprint and ran client demos.

React Native Developer (Lead) · OpenDev Pro **Mar 2021 – Nov 2021**

US client · Ride-hailing for patients who need special assistance

- Acted as lead developer, mentoring junior and mid-level developers; built both the passenger app (Expo) and the driver app (bare RN).
- Implemented full screen-reader accessibility (VoiceOver, TalkBack), camera OCR, geolocation and maps.
- Stack: TypeScript, Redux, Redux-Saga; ran sprint demos and dailies with the client.

React Native Developer · RazorTech **Nov 2019 – Mar 2021**

- Sole mobile developer on 2 React Native apps built from scratch, with CI/CD (fastlane, GitLab CI), push notifications and a Ruby on Rails REST API.
- Shipped features on an Angular + Rails lab platform that uses AI image analysis for metaphase detection.

Earlier roles **2017 – 2021**

- **Aspire** (contract, 2021): NFT marketplace for a US client in React + TypeScript, IPFS, AWS S3, Firebase Auth, Rails backend.
- **Boxtracker** (freelance, 2018–2019): designed a React + Rails 6 platform that ingests Excel progress files and charts planned vs. actual construction progress; owned the client relationship.
- **Club Preferencial** (part-time, 2017–2019): PHP/MySQL web features with jQuery and an Android (Java) app.

PROJECTS

- **job-radar**: TypeScript bot that polls job feeds, filters them with hard rules and an LLM evaluator, and pushes matches to Telegram; ports-and-adapters design, 100+ automated tests.

SKILLS

Mobile: React Native, Expo, iOS and Android releases, native modules, push notifications, Bitrise, fastlane

Web: TypeScript, JavaScript, React, Next.js, Redux, GraphQL, REST, Angular

Backend: NestJS, Node.js, Ruby on Rails, MySQL

AI & tooling: Claude Code, Globant Coda CLI, Codex, AI agents, skills and harnesses, prompt engineering, multi-model routing, OpenSpec (SDD), Playwright, LLM integration, Git, GitHub, GitLab CI, Jest

Web3: Solidity, Polygon, ERC-1155 / ERC-20

Languages: Spanish (native), English (professional working proficiency)

CERTIFICATIONS

AI Fluency: Framework & Foundations · Anthropic · 2026 · verify.skilljar.com/c/sn3869bv9tny

EDUCATION

Associate Degree in Systems Analysis (Tecnicatura Superior en Análisis de Sistemas) · Instituto Juan XXIII · 2013 – 2020

Web Developer program · Next University · 2019 – 2020
